

# The Rebuild Process

## Settle

- A final report or adjusters summary is issued along with your insurance settlement check.

## Process

- First, send your final summary to ABLE. ABLE assures that the final report is satisfactory, and sends back its revised estimate in the form of a final scope for your review .
- The check must then be processed- sent to the mortgage company if required, or deposited if possible. This depends on how the check is endorsed & your preference.

## Contract

- ABLE reviews production and assigns the next available Project Manager. We prepare the contract and final scope and send to you for final approval and signatures. Once contracts have been executed, your P.M. will call within 24-48 hours to schedule a selection appointment.

## Selection

- Your P.M. meets with you in person and tours the jobsite. You choose your materials, discuss the job and any upgrades. Once you are comfortable, you will pay your commencement fee directly to your P.M. Your Project Manager assembles materials and begins production.

## Production

- Once all materials arrive, your job begins and continues until 100% complete. Upon completion, you will sign a certificate of completion, be provided any lien waivers, and make your final payment. ABLE has 24 hour customer Service; You may call ABLE anytime with questions during your entire process.

Avg. production time frames: start to finish
